Description

The new **RedCos-P...** pressure sensor generation from +/- 100 Pa to +/- 7.500 Pa (acc. to type) is a revolution for differential pressure measuring in HVAC systems, in chemical, pharmaceutical, industrial and Offshore-/Onshore plants, for use in hazardous areas zone 2 (gas) and zone 22 (dust).

Highest protection class (ATEX) and IP 66 protection, small dimension, universal functions and technical data guarantee safe operation even under difficult environmental conditions.

The measuring ranges are scalable within the maximum ranges. At RedCos-P100 the smallest ΔP range is 20 Pa. The analogue output signal is either 0...10 VDC or 4...20 mA and can be selected on site. The integrated display is for actual value indication which can be switched off.

All sensors are programmable on site without any additional tools.

RedCos-P...-A sensors are additionally equipped with a 4 ... 20 mA IS (IS = intrinsically safe) output, e.g. for an external indicator.

EXC-RIA-261	LCD indicator (IS), installation in Ex-areas zones 1, 2, 21, 22, connectable direct to RedCos-... sensorees with type RedCos-P.- A
MKR	Mounting bracket for round ducts up to Ø 600 mm

Electrical connection

RedCos-P... sensors required a 24 VAC/DC power supply. The supply has to be connected at terminal 1 (-/-) and 2 (+/+), the analogue output at terminal 3 (mA/V) and 4 (GND). The electrical wiring must be realized via integrated junction box.

Attention! Before opening the junction box cover, the supply voltage must be shut off! The optional analogue output at RedCos-P...-A is intrinsically safe. Note the maximum connection values of intrinsically safe parameters (see table below).

Zero point compensation for pressure transmitter

RedCos-P... pressure sensor is equipped with a zero point compensation, to adjust the module to the installation position. The pressure nipples **P+** / **P-** must be connected with a short circuit tube. To make compensation please follow the menu. In menu point 18 zero point compensation is done by push button. Before starting the zero point compensation, the device should be connected to the power supply for minimum of 15 minutes, to reach the working temperature!

Display and Buttons

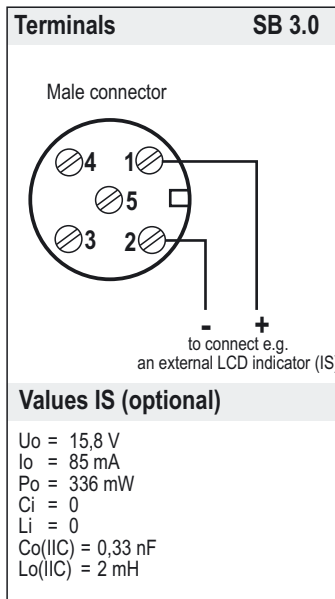

Change operation- / parametrisation mode

To change from operation to parametrisation mode and vice versa, push the enter button for minimum 3 seconds.

Indication of data logging

A blinking star in the display shows that data is received and the device is working.

Password input

The default / delivery setup is 0000. In this configuration the password input is not activated. To activate a password, go to menu point 20, change the 4 digits into your chosen numbers (e.g. 1234) and press Enter.

Please keep your password in mind for next parameter change!

Due to a new parameter setup the password is requested.

Important information for installation and operation

A. Installation, Commissioning, Maintenance

The cable has to be drawn through the cable gland. After electrical connection the cable gland must be fixed tight. IP66 must be fulfilled.

In acc. with operation RedCos sensors are maintenance free. Nevertheless maintenance must comply with regional standards, rules and regulations.

The sensors must not be opened by the customer. For outdoor installation a protective housing against rain, snow and sun should be applied. For electrical connection use the internal junction box.

Attention: Note the explosion proof rules before opening the internal junction box. Cut off the power supply.

B. Pressure sensors

After mounting and installation, a zero point compensation must be done, because the offset value depends on the installation position. Have a look to parametrisation.

C. Long cabling

For using long signal wires, shielded cables are recommended. The shield must be connected to the RedCos-P sensor inside the terminal box.

D. Separate ground wires

Use for supply and signal wires a separate ground.

Values intrinsically safe (IS) pressure sensor

Internal sensor values	
U ₀ = 7,9 V	Internal sensor IS values are corresponding to the internal pressure sensor. Due to the matter of fact that there is no external sensor connected, these IS values are not relevant for the customer but shown for the sale of completeness.
I ₀ = 48 mA	
P ₀ = 95 mW	
C _i = 0	
L _i = 0	
Co (IIC) = 1,3 nF	
Lo (IIC) = 2 mH
